Description

CP-261 Servo Drive (this component needs to be preset in the factory)

Please note: This part **is not** a direct replacement for CP-121.

Prior to ordering make sure you check what part is currently installed in your equipment.

Electronic device that translates low-energy command signals from a controller into high-energy voltage and current delivered to a servo motor. The command signal can represent the desired position, velocity or torque. The servo drive monitors feedback on the motor and automatically adjusts its output to correct for differences between the commanded value and actual.
